MANIPAL INSTITUTE OF TECHNOLOGY

A Constituent Institute of Manipal University, Manipal

II SEM M. Tech. (CAAD) DEGREE END SEMESTER EXAMINATIONS APRIL/MAY 2017

SUBJECT: FINITE ELEMENT METHODS (MME 5202) REVISED CREDIT SYSTEM

Time: 3 Hours.

Max. Marks: 50

Instructions to Candidates:

- ❖ Answer **ALL** questions.
- ❖ Missing data, if any, may be assumed appropriately.
- ❖ The use of **CERTIFIED DATA SHEET** is permitted.

1. a) Evaluate the stiffness matrix in the global Cartesian coordinate system for a plane stress triangular element $i - j - m$ defined by the coordinates (4, 4), (10, 6) and (7, 10) respectively, with x-axis of element coordinate system along $i-j$ side of the element. Let $E = 200$ GPa, $\mu = 0.3$ and $t = 10$ mm. (05)
- b) For the spring assemblage shown in **Fig. Q.1b**, evaluate the unknown displacements using **potential energy method**. (05)

Fig. Q. 1b

2. a) Obtain the stiffness matrix of a beam element in XY plane by Galerkin's Weighted Residual method. (05)

- b) Evaluate the unknown displacements and element stresses for the plane truss shown in **Fig. Q. 2b** (05)

Fig. Q. 2b

3. For the plane frame shown in **Fig. Q. 3**, determine the unknown displacements and rotations of the nodes. Let $E = 210 \text{ GPa}$, $A = 10^{-2} \text{ m}^2$ and $I = 2 \times 10^{-4} \text{ m}^4$ for all the elements. (10)

Fig. Q. 3

4. a) Obtain the expression for element stiffness matrix of 8-node hexahedral element by using **Isoparametric formulation method**. (06)
- b) For the structure shown in **Fig. Q. 4b** obtain the unknown displacement if, $k_1 = 500 \text{ kN/m}$ and $k_2 = 1000 \text{ kN/m}$. (04)

Fig. Q. 4b

5. a) Obtain the stiffness matrix of an arbitrarily oriented truss element in XY plane in the form (04)

$$[K] = \frac{AE}{L} \begin{bmatrix} C^2 & CS & -C^2 & -CS \\ CS & S^2 & -CS & -S^2 \\ -C^2 & -CS & C^2 & CS \\ -CS & -S^2 & CS & S^2 \end{bmatrix}$$

where A = cross section area of the truss element

E = Modulus of elasticity

L = length of truss

- b) For the beam shown in Fig. Q. 5b, evaluate the unknown displacements and rotations. (06)

Fig. Q. 5b
