

MANIPAL INSTITUTE OF TECHNOLOGY

MANIPAL

(A constituent unit of MAHE, Manipal)

II SEMESTER M.TECH (INDUSTRIAL BIOTECHNOLOGY)
END-SEMESTER EXAMINATION, 09/05/24 (09:30-12:00PM)
SUBJECT: Pharmaceutical Biotechnology (BIO 5408)

REVISED CREDIT SYSTEM

ANSWER ALL QUESTIONS

TIME: 3 HOURS

MAX. MARKS: 50

| Q. NO | | MARKS |
|-------|---|-------|
| 1A | What are the uses of pharmacokinetic models? | 3 |
| 1B | List out the advantages & disadvantages of Buccal & Sublingual and Intravenous routes of administration | 4 |
| 1C | What are the different theories available to explain the structure of cell membrane and explain it briefly? | 3 |
| 2A | An antibiotic is given by IV bolus injection at a dose of 500 mg. The apparent volume of distribution was 21 L and the elimination half-life was 6 hours. Urine was collected for 48 hours, and 400 mg of unchanged drug was recovered. What is the fraction of the dose excreted unchanged in the urine? Calculate k_e , Cl_T and Cl | 3 |
| 2B | If drug is eliminated by first order, what % drug eliminated after 2 half lifes of a drug. | 3 |
| 2C | <p>A new antibiotic drug was given in a single intravenous bolus of 4 mg/kg to five healthy male adults ranging in age from 23 to 38 years (average weight 70 kg). The pharmacokinetics of the plasma drug concentration–time curve for this drug fits a one-compartment model. The equation of the curve that best fits the data is $C_p = 70e^{(-0.36t)}$</p> <p>Determine the following (assume units of $\mu\text{g/mL}$ for C_p and hr for t):</p> <p>a. What is the V_D?</p> <p>b. How much drug is left in the body after 4 hours?</p> <p>c. Predict what body water compartment this drug might occupy and explain why you made this prediction.</p> <p>d. Assuming the drug is no longer effective when levels decline to less than 2 $\mu\text{g/mL}$, when should you administer the next dose?</p> | 4 |

| | | | | | | | | | | | | | | | | | | | | | | | | |
|-----------------------|--|-----------|------|------|-------|-------|-------|-------|-------|------|----|----|-----------------------|------|------|------|------|-------|-------|-------|-------|-------|------|---|
| 3A | <p>Plasma samples from a patient were collected after an oral bolus dose of 10 mg of a new benzodiazepine solution as follows:</p> <table><tr><td>Time (hr)</td><td>0.25</td><td>0.5</td><td>0.75</td><td>1</td><td>2</td><td>4</td><td>6</td><td>10</td><td>14</td><td>20</td></tr><tr><td>Concentration (ng/mL)</td><td>2.85</td><td>5.43</td><td>7.75</td><td>9.84</td><td>16.20</td><td>22.15</td><td>23.01</td><td>19.09</td><td>13.90</td><td>7.97</td></tr></table> <p>From the data above, determine the elimination constant (K) and absorption constant (K_a) of the drug using method of residuals.</p> | Time (hr) | 0.25 | 0.5 | 0.75 | 1 | 2 | 4 | 6 | 10 | 14 | 20 | Concentration (ng/mL) | 2.85 | 5.43 | 7.75 | 9.84 | 16.20 | 22.15 | 23.01 | 19.09 | 13.90 | 7.97 | 3 |
| Time (hr) | 0.25 | 0.5 | 0.75 | 1 | 2 | 4 | 6 | 10 | 14 | 20 | | | | | | | | | | | | | | |
| Concentration (ng/mL) | 2.85 | 5.43 | 7.75 | 9.84 | 16.20 | 22.15 | 23.01 | 19.09 | 13.90 | 7.97 | | | | | | | | | | | | | | |
| 3B | Derive the mathematical expression of D_{max}^{∞} and D_{min}^{∞} at steady state when the drug is administrated by multiple IV injections. | 3 | | | | | | | | | | | | | | | | | | | | | | |
| 3C | What is prodrug? why prodrugs are used in formulation? Illustrate different way of making prodrugs | 4 | | | | | | | | | | | | | | | | | | | | | | |
| 4A | What is the drawback in conventional cancer therapy and how nano-medicine helps to overcome these barriers? | 4 | | | | | | | | | | | | | | | | | | | | | | |
| 4B | Explain nanosyatem in pharmaceutical formulations | 3 | | | | | | | | | | | | | | | | | | | | | | |
| 4C | Explain different active targeting moiety used in nanomedicine and limitations of active targeting | 3 | | | | | | | | | | | | | | | | | | | | | | |
| 5A | Illustrate how nanosyatem are useful in treating drug resistance infectious diseases with proper reasoning and explanation | 4 | | | | | | | | | | | | | | | | | | | | | | |
| 5B | Why delivering drug to posterior part of the eye is very difficult? explain with an example how polymer drug delivery helps in delivering drugs? | 3 | | | | | | | | | | | | | | | | | | | | | | |
| 5C | Why tuberculosis is a very difficult disease to contain? explain how Nano-medicine is very promising method for drug delivery? | 3 | | | | | | | | | | | | | | | | | | | | | | |
